How to Invest

1. Create a profile

It only takes a minute. Sign up here to start the process.

2. Complete a Quick Quiz

Be it the risks involved or the rewards to be earned, this will help us ensure your knowledge about the basics of investing in startups.

3. Know the Deal Inside Out

Interpreting the pitch, terms of the deal, risks involved, and carrying out your own due diligence by reviewing the documents presented by the startup is essential.

4. Hit the Invest Button

Choose your investment amount, payment method, agree to the Terms and Conditions and complete your investment. Remember that you will have to complete your e-KYC, sign the consent agreement and verify your bank details before you invest.

5. Sign your S-SAFE Agreement

After investing, the startup will e-sign the S-SAFE within 48 hours. Post that you will be able to see an option to E-Sign your S-SAFE Agreement, in your dashboard and you will also be intimated via email. For this you will be redirected to our Aadhaar e-signing partner, Signzy's website. You will require your Aadhaar number and registered mobile number to complete this process. Remember, you will have to E-sign the S-SAFE within a week from the date that it is made available to you.

6. Now, you need to wait

There are two possible outcomes here. If the campaign is successful i.e. if it reaches the minimum funding goal in investment commitments by the campaign deadline, you will receive your security once the campaign closes and the final accounting takes place. If the campaign is unsuccessful i.e. if it does not reach the minimum funding goal in investment commitments by the deadline, your commitment will be refunded in full.
